For immediate release

NEXUS NMEA HPC Compass Transducer
(METS 2009) Nexus NMEA HPC: UNRIVALLED ACCURACY.

The Nexus NMEA HPC (Heel Pitch Compensated) solid state Compass Transducer uses the latest materials and precision engineering techniques to give the highest quality data of its kind; accurate to +/- 1° up to a maximum heel angle of 60° and with an output rate that can be set up to 10Hz.

A development of the already proven Nexus Network HPC the Nexus NMEA HPC offers a transducer that is compatible with all NMEA 0813 systems, the HPC features a 6-axis configuration that also incorporates heel and pitch, giving exceptional results for vital data such as true wind angle even when the boat is heeled right over.

The transducer comes with a NMEA output port, that can be configured to output RS-422 or RS-232 enabling it to be fully integrated with most modern instrumentation systems on the market; yet the entire instrument is only the size of a small mobile phone and weighs just 40 grams.

The NMEA HPC represents a real advance in high-end racing compass transducers, combining accuracy and the ability to integrate with a wide range of navigational systems with a stylish, sophisticated and compact structure that requires minimal space and maintenance. Now a standard component of the Nexus multi-instrumentation systems the HPC transducer is also available as a stand alone unit for owners looking to upgrade their existing systems or integrate into compatible radar, plotters and pilots

Article number: 23080
RRP excl. VAT: Euro €470

The NMEA HPC Compass Transducer is available from Nexus dealerships around the world. More information about the Nexus worldwide dealer network can be found at: <http://www.nexusmarine.se>

END

Editors note:

Nexus Marine specializes in the design and development of marine instrumentation and navigational equipment for racing and cruising sailors. Created in late 2006 as the result of a demerger from the Silva Group, Nexus has a long pedigree of creating durable and reliable instruments for a wide range of marine applications.
